CORE COMPETENCIES AND SKILLS

- Python
- Ruby on Rails
- RESTful API Design
- PostgresSQL
- Kubernetes
- Google AI Professional Cert
- Cloud Infrastructure
- Data Engineering/ETL
- AI Development
- GCP
- Git & GitHub Actions
- Web Architecture

PROFESSIONAL EXPERIENCE

Resultant, Indianapolis, IN (Remote from Cincinnati, OH) **Mar 2024-Present**

Engineering Consultant II

CoSHIE SDOH Referral Portal – State of Colorado (Rails, Postgres, Python, GCP)

- Developed a full-stack web platform enabling healthcare providers to accept/decline Social Determinants of Health (SDOH) referrals across Colorado
- Built backend logic in Ruby on Rails and PostgreSQL; implemented Turbo Frames for lazy loading and seamless UI updates
- Designed and maintained a Python-based REST API layer to expose SDOH referral data for analytics and partner integrations
- Collaborated on SDOH data ingestion, normalization and export
- Independently deployed a secure login service using MyColorado and PingID with OAuth2 and Google Cloud IAM, managing full infrastructure setup in Python and GCP
- Worked with public health officials and nontechnical users to refine workflows and user experience

Iowa Child Care Connect (ASP.NET, Tailwind, JS)

- Designed and implemented a guided, TurboTax-style UI to walk parents through childcare eligibility and provider matching
- Translated complex program rules into a clear, user-friendly series of conditional questions
- Collaborated with project stakeholders to ensure logic matched state policy and adapted to varying user paths

MSP Migrations – Kansas City, Reynosa(Mexico), & Texas (Windows, Intune, Office 365)

- Supported a full IT infrastructure migration during a corporate acquisition in Kansas City and Mexico, working directly with local staff across departments
- Selected to lead a solo facility migration in Texas based on performance; successfully executed all device, user, and system transitions
- Built strong on-site relationships with everyone from senior leadership to floor staff, translating technical changes into approachable language and ensuring minimal disruption
- Coordinated with both technical and nontechnical teams to troubleshoot, train, and document the new environment

Lubrizol, Cleveland, OH **Aug 2022-May 2023**

Process Mining Intern

- Collaborated across departments, e.g. Accounts Payable, Order to Cash, Accounts Receivable, with end business users to improve various processes and to achieve value realization
- UsedSQL,SAP,andCelonis to manage process data, create complex business reports and discover new value opportunities, e.g. On-time payments, touch less invoices, incomplete freight orders
- Held meetings throughout the term, with individuals from every department to gather user feedback to improve usability of reports and import new data

Gorilla Glue, Cincinnati, OH **May 2022-Aug 2022**

Data Science Intern

- Collaborated with the technology department to develop and maintain software used in the management and utilization of data
- Worked individually to clean and prepare data to be entered into their data management software
- Experimenting with applications of AI and machine learning for company data to improve efficiency and better analyze survey data, used Python and Natural Language Processing

EDUCATION

Rochester Institute of Technology – BS of Computer Science and Software Engineering
